

Marmara quality is produced from a strict selection of the finest French hemp fibers. Since the areas of production are located near the sea, the fibers benefit from the mild climate and high moisture.

We team up with the farmers during the retting process to ensure the straws get the right level of retting to deliver the best fineness possible for spinning. During the industrial process, we blend several lots together to ensure a consistent quality and color month after month.

Scouring of hemp fibers is done strictly based on **REACH regulations**. Scouring is done on the fibers to obtain the highest level of fineness. Scoured fibers should be kept to spin finer counts and/or a high hemp ratio in the blend.

Those fibres are cottonized in our mill in North part of France.

Technical specifications

Cottonized hemp fiber type Marmara Scoured

FINENESS

Micronaire :	9,94
Fineness :	8,08 dtex

HIGH VOLUME INSTRUMENT

Strength :	54,9 cN/tex
Elongation :	1,7 %
Mean Length :	28,5 mm
UHML :	36,3 mm
Unif Index :	78,4 %
SFI	16,1 %

COLOR

Color :	Natural
---------	---------

PACKAGING

Weight :	110 / 120 kilos
Size :	110 x 55 x 55 cm
Wrapping :	None (<i>optional</i>)
Volume :	9/10T in a 20' container 20/22T in a 40' container

SPINNABILITY

Ne 20 / Ne 30 with up to 50 % Hemp
